Re: Middle School Domestic Hot Water System
Repair
Date: March 26th, 2019

The Middle School Domestic Hot Water system includes a 350 gallon holding tank. The purpose of this tank is to store hot water so that it is available for use at any time. The tank is a necessary component to the system; without it the building is without hot water. This tank began to leak a couple of weeks ago. We have made a temporary repair which is allowing us to plan the replacement.

I have contacted several vendors to check price and availability. TMI, Inc. of Troy was the least expensive vendor and they can complete the work during the April break week. The cost for replacing the tank will be \$ 12,500.00.

I would ask that you consider using the repair reserve for this scope of work.

Please contact me should you have any questions
